

MINI PROJECT

Story behind the Problem Statement:

After six years in the hospitality industry, I encountered a persistent challenge: the inefficiency of maintaining accurate records of event attendees, which led to operational disruptions and impacted customer experience. Recognizing the need for a more effective solution, I decided to create a website/app designed specifically to streamline the process of record-keeping for clubs, ensuring seamless management and enhanced service quality.

Problem Statement:

To solve the problem of maintenance of records and bookings inside the club.

Proposed Solution:

- A website/app which will keep records of booking and provide this to the clubs for better record matching.
- Additionally, adding a recommendation system for recommending events on the user's preference.
- Clubs can add or remove events from the website on their own.

Present Solution:

Bookmyshow (bms): Which holds majorly the share of online ticket/spot booking.

Missing: Not a club centric feature.

Paytm Insider: Does the same thing like bms.

Missing: No recommendation model.
