

Name: Naman Babbar

Class: TY - CORE 6

Subject: UCD

Roll No: 2223604

Assignment - 4

Q1. Describe UX, UI and GUI with suitable example.

→ • User Experience (UX) :- It refers to the overall experience a person has when interacting with a product or system.

Eg: Imagine an e-commerce website, a good UX would ensure that users can easily find products, filter search results, without confusions or delay.

• User Interface (UI) :- It refers to the specific design of the elements that user interacts with, such as buttons, text fields, icons and images.

Eg: UI includes how "Add to Cart" button looks, its size, color and placement.

• Graphical User Interface (GUI) :-

It refers to the interaction through graphical elements like windows, icons and menus.

Eg: In a photo editing software, GUI includes various icons for tools (brush, eraser), menus

(file, edit, image) and sliders for adjusting image properties like brightness or contrast.

Q2. Give importance of UX and UI in UCD.
→ In UCD, UX and UI are crucial for user-friendly product.

- UX ensures the product meets user needs, is easy to use, and provide a seamless, satisfying experience. It focuses on usability, accessibility and problem-solving.
- UI enhances visual appeal and usability, ensuring brand consistency. It provides feedback, control and responsiveness across devices.

Q3. List and explain 8 steps of UX design process.

- 1) Define: It is necessary to determine exactly what needs to be created, and why.
- ii) Research: Designers conduct research to gain a deep understanding of their users and their needs.
- iii) Analysis & Planning: They develop user personas, user stories, wireframes, and other high-level plans.
- iv) Design: Now, start sketching out some ideas for how they'll interact with your interface.

- v) Prototyping :- It allows you to present a more realistic experience for your usability testing.
- vi) Testing :- It helps identify any areas that need improvement before the final product goes.
- vii) Launch :- The product is now ready for deployment.
- viii) Iteration :- The design is an ongoing process and the goal is to continuously improve.

Q4. Define Information Architecture. Give its role in digital products.

→ It is the science of organising, prioritizing, and labelling content to structure digital products. Visualize it as a blueprint of the product's infrastructure and features.

• Role in Digital products:

- i) Enhances Usability.
- ii) Supports Navigation.
- iii) Context Organization.
- iv) Improves Findability.
- v) Consistency.

Q5. Discuss Information Architecture with its four steps.

- i) Organization System :- It involves categorizing information logically.

- ii) Labelling System: Labels group large amounts of information under simple tags.
- iii) Navigational System: Defines how users move through content.
- iv) Searching System: Provides users with a way to find specific content using keyword or filters, like it real estate websites where users search for properties based on criteria.

Q6. Explain UX Research Tools: Contextual Inquiry and Card Sorting.

- • A Contextual Inquiry is focused around 4 key principles:
- Context
 - Partnership
 - Interpretation
 - Focus.

• Card Sorting is a UX research method used to understand how users categorize and organize information.

It is of 2 types:

- Open Card Sorting
- Closed Card Sorting.
