InFlux

Charging ahead with seamless power

❖ Proposed Solution

- Provide a centralized website for locating EV charging stations.
- Collaborate with all major EV charger brands.
- Offer a unified wallet for easy payments across different chargers.

- A responsive website for real-time station discovery.
- Integrate APIs from charger brands for location and availability data.
- Secure online payment systems for the unified wallet.
- Web-based GPS integration for station mapping and directions.

- Growing demand for web-based EV charging solutions with market growth.
- Collaborating with brands reduces infrastructure challenges.
- Secure payment systems ensure user trust and adoption.
- Scalable for future additions like mobile compatibility.

- Simplifies the search for EV charging stations via a web platform
- Unified wallet improves user convenience and transaction speed.
- Strengthens the EV ecosystem by promoting green transportation.
- Increases revenue for participating EV charger brands.
